ABSTRACTED-PUB-NO: JP 06256151A

BASIC-ABSTRACT:

Skin cosmetic comprises animal prod. (a) which is collagen, placenta extract, hydrolysed konkiorin(sic), elastin, fibronectin and/or vitronectin; and (b) glabridin.

Glabridin is of formula (I) and is contained in Glycyrrhiza glabra Linne var., a kind of licorice root. The amt. of glabridin in cosmetic prepn. is 0.001-10 wt.%, pref. 0.01-1.0 wt.%. The amt. of animal substance is 0.0001-5 wt.% and that to glabridin is 1-500 wt.%. Glabridin is obtained by extracting roots of licorice root or its water extract residue with organic solvent, e.g. lower aliphatic alcohol, lower aliphatic ketone, ether, halogenated hydrocarbon etc.

USE/ADVANTAGE - The skin cosmetic prepn. effectively prevents skin inflammation and deposition of pigment caused by UV as well as skin disturbance due to adequate moisturizing activity without causing adverse effects.

In an example, Glabridin crystals were dissolved in a mixt. of ethanol/1,3-butylene glycol, and surfactant, flavour and para-oxy benzoic acid ester were added and dissolved, followed by adding purified water and other substances to give homogeneous soln. Backs of brown guinea pig were shaved, and 0.1% oxoralene soln. was applied, and 30 mins. later, UVA 1J/cm² was irradiated. Irradiated parts were divided into 5 parts where the following 5 solns. (A-E) were applied respectively to watch erythema inhibitory activity after 24 hrs. (A = the above obtained cosmetic soln., B = the cosmetic soln. without glabridin, C = the cosmetic soln. without animal ingredients, D = the cosmetic soln. without both glabridin and animal ingredients, and E = the control). The results showed that inhibitory activity was more remarkably recognized when A was applied than any other. A>>C=B>D=E.

ABSTRACT:

PURPOSE: To provide a novel skin cosmetic capable of effectively preventing the blacking of skins and excellent also on the point of safety.

CONSTITUTION: A skin cosmetic contains glabridin and an animal ingredient (e.g. collagen, placenta extract, conchiolin hydrolysate, elastin, fibronectin, vitronectin) and prevents the generation of inflammations and the production and deposition of skin melanin caused by external irritations such as UV rays due to the synergistic action of the essential ingredients.
